

## Electrical Testing

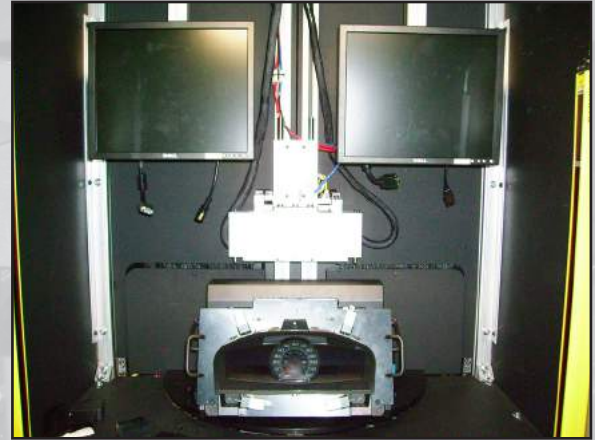

Koops electrical testing equipment is designed to your specific product requirements. Customers in the automotive, medical and other industries must profitably meet stringent regulative requirements. Inline and end of line test systems assure the highest product safety and quality.

### Features and Benefits

- Enables zero defect manufacturing
- PLC and PC controls
- Delivers a competitive advantage

### Products Tested

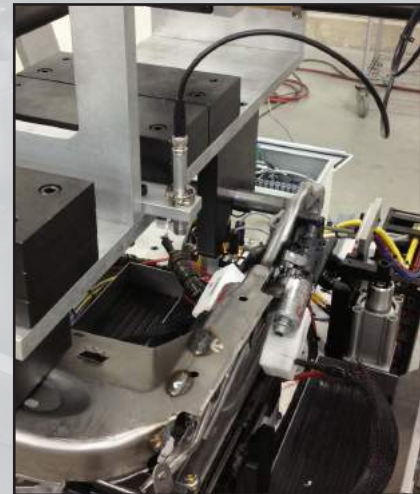

- Headliner assemblies
- Medical products
- Automotive seat assemblies
- Automotive interior subassemblies (floor consoles, overhead consuls, visors)
- Instrument clusters

Vision check to verify proper display

End of line check to verify installed components and wire harness are functioning properly

Exercising seat motors

Burn in and final check station to test program and verify proper assembly of part
